

## Appendix 1

### Notes

- 1 Top Target 1 has been re-worded in line with the wording of NI 145 about people in non-settled accommodation. Former sub-objective 4.1 now becomes sub objective 1.3 as it now more closely informs this revised Top Target
- 2 This relates to the Valuing People resettlement list/target drawn up after Valuing People White Paper was issued (to have been completed by 2004)
- 3 The measure here is comparative between 2009 and 2010. You are asked to identify within those numbers the people who have come in from the Assessment and Treatment part of the definition. If you have additional people being included because they have come off Section – just include them in the Assessment and Treatment figures
- 4 For the purposes of this information collection, when someone has been in Assessment and Treatment for over 12 months, that person is automatically considered to fall within the revised campus definition – i.e. **the definition starts to be applied to everyone at 12 months, and not at 12 months following completion of treatment in A&T**
- 5 Provide numbers (a) in the locality, and/or (b) out of the locality. Precise locations are not needed.
- 6 Specify length of stay since initial admission and not from the date of most recent return from a period of 'leave' or temporary stay in other accommodation e.g. hospital
- 7 This sub-objective (1.3) covers all adults who are in hospital – both private and NHS, and both in and out of the local area. It includes everyone irrespective of the NHS funding 'stream' that pays for their care. It includes people who are under MH Act or Home Office Section and people who are in forensic and low or medium secure services. ***It excludes any individuals already being reported on under the campus target above.***
- 8 Although Person centred planning should be underway or imminent for all individuals likely to be affected by changes, a move or discharge can take place without a completed Plan being in place, as long as the process has started and is completed/later reviewed following a person's move/discharge
- 9 This applies to children who have significant or complex learning disabilities and who may have associated long term conditions – the aim is to ensure good longer term planning to help them through key transition periods up to adulthood
- 10 Information about older family carers could be usefully collected to highlight: (a) those carers over 65 years, (b) those over 75 years, and (c) those from minority ethnic groups

- 11 The role of the Primary care team is to maintain and enhance the health of all their practice population including those with learning disabilities. This may at times involve liaison with other specialist teams or individuals including LD, MH, older people, etc.
- 12 Although Facilitators may not members of the Practice, the GP Practice is responsible for maintaining up to date records of their patients' Health Facilitators
- 13 Where appropriate, the standards in this document should be cross-referenced with regional Clinical Networks/NSR workstreams e.g. Cancer standards, and their linked performance review processes
- 14 Numbers should be expressed as a %age of total number of people screened over the whole local population
- 15 Sub-objectives 2.5 and 2.6 relate to the responsibilities of all commissioners – and to the agreements and contracts they establish with NHS providers of both LD specific and mainstream NHS services
- 16 For training relating to safeguarding adults, it is expected that training and corresponding targets apply to all staff in all organisations and target percentages need to apply to *each* organisation (including those in private and voluntary sector)
- 17 This includes young people who currently receive support/care either in or out of district, and in both NHS and social/educational provision
- 18 “Promoting involvement” needs to take account of funding, transport, carer responsibilities, accessible information, provision of interpreters if required, physical location of meeting, etc.
- 19 This applies to those over 65 years old
